

# AxUSBshare

Use USB devices from another computer **over the network**

AxUSBshare shares license dongles, readers, printers and other USB devices over the network. To the application, the device looks as if it were plugged into its own machine.

## Why AxUSBshare

- ✓ The license dongle stays protected in one place
- ✓ Servers and machines without an accessible port use the device
- ✓ Multi and Simultaneous use modes for HASP dongles
- ✓ Web panel and runs as a service
- ✓ Windows and Linux
- ✓ Free Client: only the Server is licensed

## How it works

- ✓ Server: installed where the USB device is plugged in
- ✓ Client: installed where the device will be used
- ✓ Connection over the local network or VPN

## Modes

- ✓ Single: one connection at a time
- ✓ Multi: several Clients connected (HASP, HID, microphone, webcam)
- ✓ Simultaneous use: dongles only, if the program allows

## Devices

- ✓ Compatible HASP dongles and UVC webcams
- ✓ Readers, scales and sensors (Multi only if HID)
- ✓ Printers and label printers
- ✓ Flash drives, disks, smart card and serial (Single mode)

## Requirements

- ✓ Server and Client for 64-bit Windows and Linux x64 (with systemd and USB/IP)
- ✓ Local network or VPN between the computers

## License and trial

- ✓ Per-computer license on the Server; free Client
- ✓ Free 30-day trial with 1 device and 1 connection
